

Midea

One of the largest manufacturers of home appliances in the world

The number 1 brand in the world for air treatment products *

Midea

For over 50 years we have created value for our clients, with the goal of improving the quality of their life, thanks to the development of new technologies and the continuous innovation of our products. Thus continuing our path of growth on an international scale, transforming challenges from important realities in China into a leading global company. Ambition, edition, collaboration and innovation are values that characterize our commitment towards a future of great transformations. We have always proven to know how to think in big, working hard to develop a solid leadership of product, with the maximum attention to efficiency productivity and the goal of a globalized commercialization. Our mission is to continue to evolve, abracing the challenges of the future e offering, ai our consumers, a technology capable of being close ai their needs.

Refrigerator Production Bases (China)

S

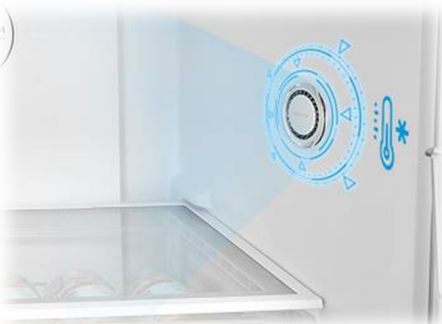

We produce over **130** refrigerators per minute!!! *

A composite image for a refrigerator advertisement. The left side shows a family of four (a man, a woman, and two children) smiling and embracing each other, overlaid with a semi-transparent blue filter. The right side shows a modern kitchen with white cabinetry and a stainless steel refrigerator. The refrigerator has a vertical control panel on the right door and a long black handle. The kitchen has a light-colored wooden floor and a warm, ambient glow from under-cabinet lighting.

SMART SENSOR System

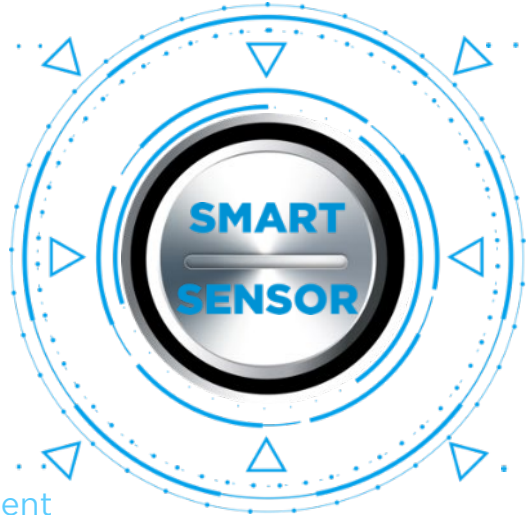

The sensors automatically detect any temperature variations caused by the introduction of new foods and automatically activate the devices to restore the set temperature, avoiding excessive and harmful fluctuations for the food.

1+4

Collaborative Sensing

An temperature sensor outside with four internal temperature sensors

Accurate Sensing

The perceptive detection of temperature varies between $\pm 0.5^{\circ}\text{C}$, keeping the internal temperature stable

$\pm 0.5^{\circ}\text{C}$

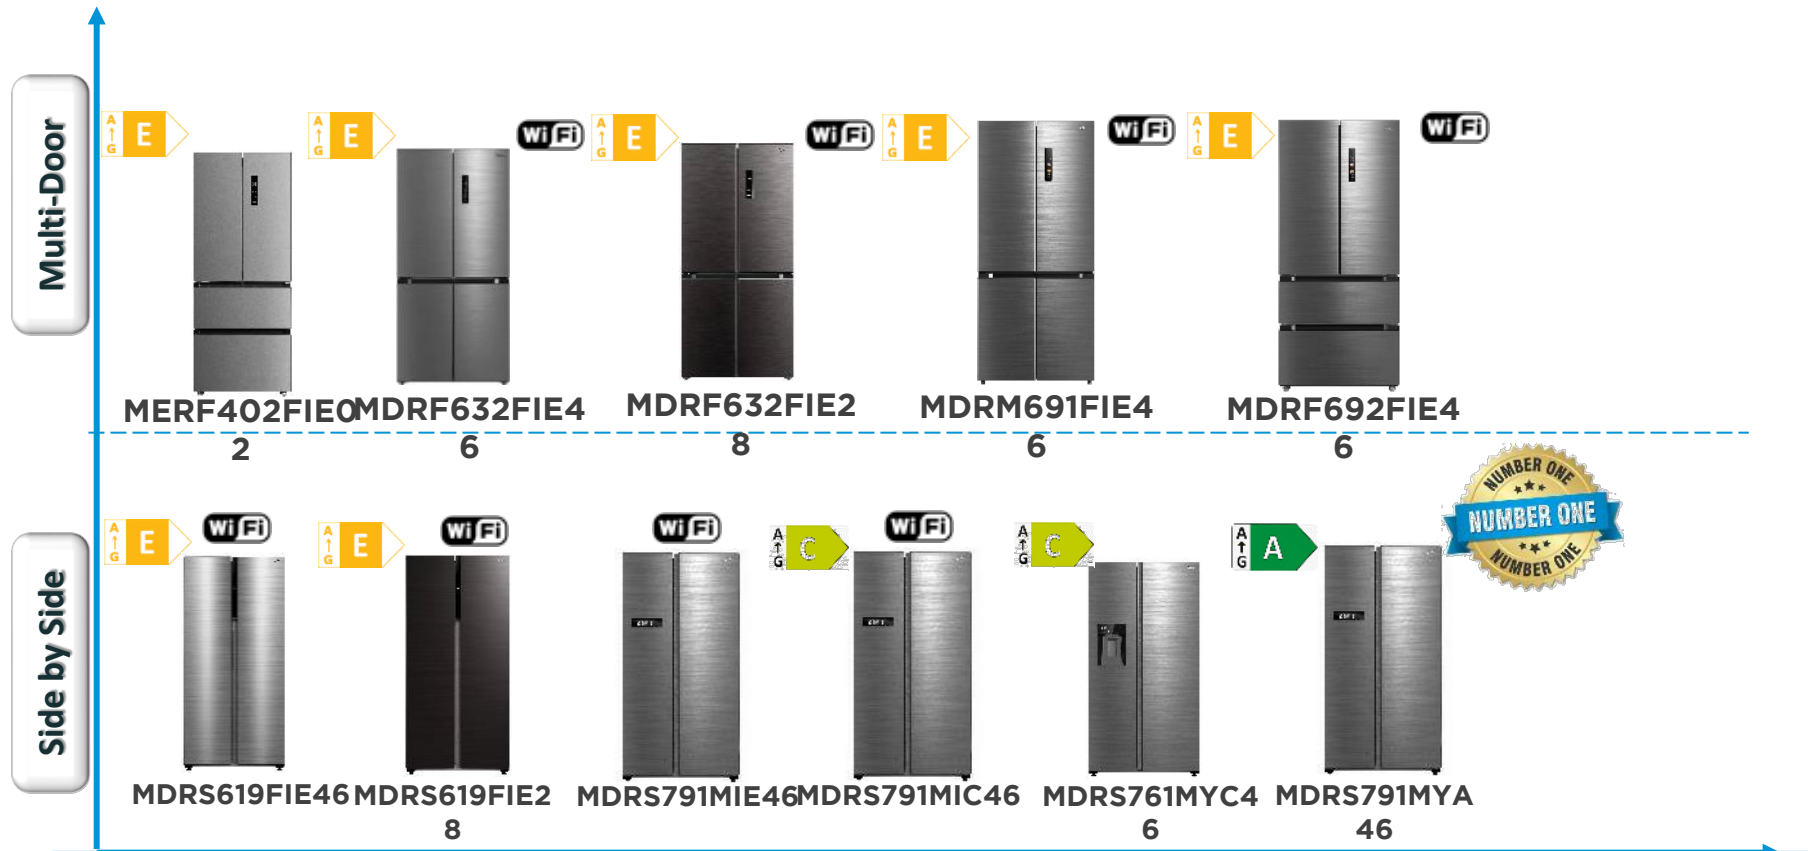

-40°C to 80°C Ultra-wide Sensing

The «ultra-wide» detection of ambient temperature ranges from -40°C to 80°C , ensuring normal operation even in the presence of extreme external temperatures

0.1s Quick Sensing

The rapid detection of temperature in 0.1s keeps the internal temperature stable
